

Environmental Policy

Armadillo Engineering is a precision engineering and welding business. We recognise that our operations result in emissions to air and generate solid and liquid waste. It is our aim to comply with legislation and other requirements, continue to reduce the environmental impact of our business and operate in a responsible manner. This policy describes how we will achieve our aims.

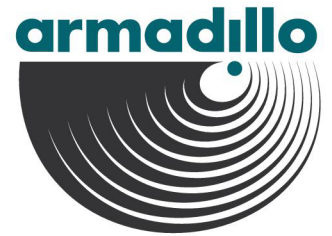

The company will meet this commitment by:

- Make efficient use of natural resources by conserving energy and water, minimising waste, and recycling where possible.
- Minimising the levels of emissions and discharges to water, land, and air.
- Keep transport and packaging to a minimum.
- Ensure all vehicles are maintained to legal requirements.
- Inform all employees of the company's environmental objectives and how they can assist in meeting them.
- Work with key metal suppliers to encourage their use of an EPD policy and to support any request from customers for an EPD statement.
- Operating a "good neighbour" policy in a spirit of openness and dialogue with other organisations to ensure an active response to their environmental concerns.

The Managing Director has overall responsibility for ensuring that adequate resources are available to achieve our environmental objectives, and that the policy is implemented.

All employees have the day-to-day responsibility, in all areas, to ensure that the aims and objectives of the policy are met.

Mr P Edwards
Managing Director

Environmental Objectives

1. Reduce vehicle emissions by scheduling of work to reduce travel.
2. Regular servicing of all vehicles.
3. Reduce the generation of general and hazardous waste by reducing stock holdings and ensuring jobs are accurately scoped and priced to minimise material usage.
4. Recycle as much paper cardboard, plastic, metal, and timber as possible.
5. Reduce office paper usage by use of email and electronic documentation.
6. Reduce energy consumption by monitoring energy usage, improvement projects and good housekeeping.
7. Include environmental considerations in investment decisions for new plant, equipment or working practices.
